(54) Title: DEVICE FOR COUNTING CELLS AND METHOD FOR MANUFACTURING THE SAME

(57) Abstract: Disclosed are a device for counting cells and a method for manufacturing the device. The device comprises a trans-
parent upper substrate and a transparent lower substrate. Fine lattice patterns for counting cells are formed on the lower substrate.
A space for filling the sample, including cells, is provided between the upper substrate and the lower substrate. A hole for injecting
the samples into the space for filling the samples is provided in the upper substrate. The device is disposable, and the cost of man-
ufacturing the device is low. It is easily to fill the samples into the filling space and to count cells by using the device. The upper
substrate and the lower substrate are bonded, and thus, no cover is required.
